Introduction

National Blood Transfusion Service (NBTS), Sri Lanka is a fully government owned special campaign coming under the Ministry of Health. It is the sole supplier of blood and blood products to all government hospitals and majority of private sector hospitals. There are 98 functioning Hospital Based Blood Banks & 2 Standalone Blood Centers affiliated to 19 cluster centers, depending on the geographic distribution.

* 2 New Blood Banks were established in 2016 – Kiribathgoda & Kattankudy

* In 2017, planning to open 10 Blood Banks – Siyabalannduwa, Nintavur, Medavachchiya, Eravur, Chavakachcheriya, Deniyaye Theldeniya, Kebethigollawa, Welikanda & Galgamuwa.

Vision

To be a unique model for the world securing Quality assured blood services, through a nationally coordinated system.

Mission

To ensure the quality, safety, adequacy and cost effectiveness of the blood supply and related laboratory, clinical, academic and research in accordance with national requirement and WHO recommendations .

National Blood Transfusion Service

The Director NBTS being the chief executive officer of the organization, who is responsible for implementation and supervision of the common decisions taken by the organization.

The majority of NBTS staffs are affiliated with the 19 cluster centers across the country. Each cluster centre is headed by Consultant Transfusion Physician or a senior medical officer. Each centre also has a Consultant Transfusion Physician who gives clinical guidance.

This report compiles the consolidated statistics of the performance of the blood banks of the National Blood Transfusion Services for the year 2016.

Statistics of Teaching and Training Unit

Table 20:

A: Training programs conducted for Staff categories of NBTS

| Staff Category | Duration | No of Trainees |
|-------------------------------------|----------------------------|----------------|
| Medical Officer's | 6 weeks | 12 |
| | 4 Weeks | 77 |
| | 2 Weeks (RHO) | 16 |
| | 2 Weeks (Refreshers) | 2 |
| | Total | 107 |
| Nursing officers | 4 Weeks | 6 |
| | 2 Weeks | 34 |
| Medical laboratory Technicians | 8 Weeks 8 Weeks-ongoing | { 22 |
| Public health Inspectors | 8 Weeks(Refresher) | 1 |
| | 8 Weeks | 9 |
| Public health Laboratory Technician | 10 days | 1 |
| Blood bank drivers | 3 days | 4 |
| | 1 day(Refresher) | 14 |
| Junior Staff | 1 Week | 27 |

B: Foreign delegates

| Programme | Duration | No of trainees |
|---|-----------------|-----------------------|
| Training on safe blood transfusion for a team from Bangladesh | 2 Day | 8 |
| AATM trainees | | |
| Medical officers | 3 Weeks | 2 |
| MLT | 4 Weeks | 1 |

C: Others Staff Categories

| Staff Category | Duration | No of Trainees |
|--|--------------------|-----------------------|
| 1. Post graduate Hematology diploma trainees. | 3 months | 7 |
| 2. Post graduate virology Trainees | 2 weeks | 1 |
| 3. Medical Students | | |
| -USJP | (3 days ×3 Groups) | 167 |
| -Colombo Faculty | | 235 |
| (Medical Students ,Faculty of Medicine, University of Colombo, Infectious & parasitic disease module) | 01 day | 14 |
| 4. BSc. Nursing graduates | 1 Week | 14 |
| 5. Nursing Students NTS –Colombo | 1 & 4 Weeks | 157 |
| 6. NINDT NO- Orientation program on HLA Lab | 1 day | 20 |
| 7. Intern pharmacists | 1 day | 33 |
| 8. Navy Health Assistants | 1 day | 44 |
| 9. Public Health Inspectors Diploma Trainees - NIHS | 1 day | 89 |
| 10. SPHI trainees - NIHS | 1 day | 35 |
| 11. Medical Laboratory Technicians | | |
| BSc Medical Laboratory Sciences 7 th batch- USJP | | 28 |
| BSc. Medical Laboratory Sciences 8 th batch- USJP | | 28 |
| BSc. Medical Laboratory Sciences 8 th batch- KDU | | 31 |
| BSc. Medical Laboratory Sciences-University of Peradeniya | | 9 |
| MLT school Trainees- NIHS Kaluthara | | 23 |
| MLT school trainees-Peradeniya | | 23 |
| Total | | 958 |

Work Shops Conducted by the Teaching & Training Unit

| Programme | Duration | No of trainees |
|---|-----------------|-----------------------|
| Frozen Red Cell facility- Hands on training program Dr. Martine Smith Mr. Johan Lager berg | 1 Week | 15 |
| AABB Quality Management system, AABB Accreditation program AAABB Standards for cellular Therapy Services 7 th ED | 2 Weeks | 30 |
| Leucoreduction of blood products – AAMT Sri Lanka Chapter | 1 day | 123 |
| CME programme on Immunohaematology & TTI testing By Ortho Clinical Diagnostics | | |
| - Medical officers | 1 day | 43 |
| - MLT | 1 day | 53 |
| HLA Training – Luminex 200 | 5 days | 9 |
| Spectra optia training – AP & TPE | 1 day | 25 |
| Total | | 298 |

The project of NAT facility at National Blood Centre

Introduction:

Nucleic Acid Testing (NAT) was introduced to the National Blood Centre (NBC) by the State of Art Technology Project funded by the government of the Netherlands.

Nucleic Acid Testing directly amplifies and detects the genetic material (DNA or RNA) of viruses in order to screen for the existence of transfusion transmitted infections in donated blood (Eg: Human Immunodeficiency Virus-HIV, Hepatitis B Virus-HBV and Hepatitis C Virus-HCV).

Advantages in implementing NAT in the National Blood Transfusion Service:

Even though the high cost for the infrastructure and consumables, NAT provides the following advantages,

- Safeguard the blood safety furthermore in reducing the window period by early detection of viral infections and before appearance of antibodies.
- Fulfils an International requirement for the provision of plasma products for Plasma Fractionation Plants.
- Detects mutant, variant viruses that may not be detected by antibody detection methods.

Review Report of Nucleic Acid Testing (NAT) facility at National Blood Centre (NBC) – up to 31st December 2016

Testing summary:

- NAT testing were done for the samples collected in- house or from mobile campaigns conducted by the NBC.
- Following table summarizes the testing done up to 1st January 2017.

Table 21:

| Total tests performed | Tested samples |
|-----------------------|----------------|
| 49,726 | 42,675 |

Stem Cell Transplantation.

- ❖ Hematopoietic stem cell transplantation (HSCT) is the transplantation of multi potent hematopoietic stem cells, usually derived from
 - Bone marrow
 - Peripheral blood
 - Umbilical cord blood, which may be of autologous or allogeneic in origin.
- ❖ It is most often performed for patients with certain haematological malignancies, such as multiple myeloma or leukemia and for congenital disorders of the blood and bone marrow such as thalassemia and sickle cell disease.
- ❖ Advantages of the peripheral stem cell transplant :-
 - Less invasive than Bone Marrow harvesting
 - No need of anesthesia

Procedure:-

- I. On the 24th of October 2016, the Stem Cell Transplantation was initiated.
- II. There were 4 procedures, which was done for 2 patients diagnosed with Multiple Myeloma. All these 4 procedures were done at the Regional Blood Centre, Apeksha Hospital, Maharagama.
- III. Processing of harvested Stem Cell product was done at NBC, and the Teaching & Training was done by Australian Delegates by the St.Vincet's Hospital, Sydney.

Procedures:

1. Initial 2 procedures were done under the supervision by the Foreign Delegates.
2. 2nd patients transplantation was done by the local team.

Outcome: - Both the Stem Cell Transplantations were done successfully in December 2016.

PATHOGEN INACTIVATION of Platelets:

The possibility of transmitting infectious organisms via blood products and plasma derivatives (donor derived or contaminated microorganism) is a major public health concern worldwide.

Ability to ensure the safety of the blood supply, with donor screening and laboratory testing is limited because it requires prior knowledge of the possible infectious agents, and development of effective laboratory tests for each agent. In addition to that there is no method to prevent transmission of infections during window period.

Pathogen Inactivation is a proven method in preventing risk of Transfusion Transmitted Infection and bacterial contamination.

There are two main techniques for pathogen inactivation

A. Chemical Inactivation

Eg: Solvent Detergent Treatment (SDT): -

Used mainly on products and Lyses Cell Membrane and viral envelopes leading to more than 5.4 to 6.0 log reductions of sensitive pathogens.

B. Photo Chemical Treatment

This is applicable to plasma and platelet products, currently available methods include Intercept & Mirasol.

Pathogen Inactivation at NBC currently practice Intercept on pooled platelets.

Table 22 :

| Month | No of PI pools | Issues | Discards |
|--------------|----------------|-----------|----------|
| December | 14 | 14 | 0 |
| TOTAL | 14 | 14 | 0 |

Advantages of pathogen Inactivation-

1. Reduce the risk of TTI
2. Increase the shelf life of platelets up to 7 days
3. There is evidence that it prevents transfusion Associated Graft Versus Host Disease.
4. Irreversibly damage Nucleic Acid & Inactivates Micro Organism & Leucocyte.

FROZEN RED CELL (FRC)

Red Blood Cells (RBC) can be frozen and stored for up to 10 years.

There are two methods for frozen red cell: -

1. High Glycerol method (frozen red cells are stored at - 86C⁰)
2. Low Glycerol method (frozen red cells are stored at - 120C⁰)

This technique has many advantages.

- Frozen Red Cell (FRC) have long shelf life
- A stock of rare Blood Groups (Such as Bombay O) can be frozen and preserved for future usage.
- Patients with special conditions such as multiple red cell antibodies who require blood will get benefits out of this.

Since 2015, NBTS Sri Lanka also started this practice of freezing Red Blood Cells, Like developed countries.

International and local training programs have been conducted on this technology and many programs are scheduled in the year 2016.

Currently a validation program is being conducted at NBC on Frozen Red Cell technology.

Table: 23

| No of Red Cell Units Frozen | No of Red Cell Units Deglycerolized |
|------------------------------------|--|
| Bombay O Rh D Positive units | 7 |
| A Rh D Positive Units | 1 |
| TOTAL | 8 |
| O Rh D Positive Units | 8 |
| TOTAL | 8 |

Note: -

As fresh Blood has been available there was no demand to use Frozen Red Cell Units.
